The colours of our plastic packaging which are always available are shown on the next 6 pages. In addition to our 11 standard colours you can choose from a range of 114 special colours. Among them are transparent, semi-transparent and metallic colourings.

Please note that the illustrations are not colour-binding. We recommend to match the colour with a Pantone Formula Guide to define the colour shade precisely.

Of course, we can also produce your packaging in RAL and HKS colour shades or even in your specific brand colours.
